Steelbird Launches Carbon Fiber Helmet

Who wouldn't want to buy a carbon fiber helmet? Carbon Fiber is stronger, lighter, durable and can tolerate high temperatures making them the perfect ingredient for a motorcycle helmet. However, till date there was no company locally manufacturing it. Add to that the high import duties on helmets and all of a sudden carbon fiber helmets become out of reach for most. However, now Steelbird (a leading Indian helmet manufacturer) has launched India's very first carbon fiber helmet with prices starting at Rs. 10,000/-.

Carbon fiber consists of extremely thin fibers and is composed of carbon atoms. These atoms are bonded together in microscopic crystals aligned in a manner which makes it very strong. Thousands of carbon fibers are twisted together to form a yarn. Are you looking to buy a carbon fiber helmet? Will you consider buying Steelbird's latest offering?
