Audi is targeting a new market segment with the A7 Sportback (checkout the India unveiling [here](#)). The large five door model is pure high-tech. Its body is very lightweight thanks to numerous aluminum components. The elegant interior shows a craftsman's level of workmanship. The four V6 engines combine refined power with groundbreaking efficiency. The 3.0 TDI with 150 kW (204 hp) and multitronic has CO2 emissions of just 139 grams per kilometer. The sporty chassis comes with new solutions, such as electromechanical power steering. When it comes to assistance and infotainment systems, the luxury-class coupe exhibits all of the innovative power expected of Audi.

The five-door coupe from Audi combines supreme, long-distance comfort with a sporty character. The body is comprised primarily of aluminum and high-tech steels, making it extremely lightweight and safe. Optional LED headlights reinforce the unmistakable expression of the A7 Sportback and provide all light functions with light-emitting diodes while minimizing energy consumption. Bi-xenon headlights and LED tail lights come standard. The innovative all-weather light function has also been integrated into the headlights, replacing the classic fog lights. Like Audi's A8 flagship, the A7 Sportback also combines a new level of technical intelligence with logical, intuitive ergonomics and self-explanatory operation.

The sinewy sportiness of the exterior carries over into the interior of the A7 Sportback, where Audi again demonstrates its leading role in automotive design. The salient element is the “wrap-around,” a horizontal line that encircles the driver and front-seat passenger in the interior to provide a feeling of safety and security. The

wave-shaped application strip with its integrative dynamics is the salient element of the dashboard. The utmost care has been devoted to every last detail in the interior. Workmanship is at a craftsman's level and Audi plans to launch it in India next year. We can't wait and we are sure you can't either.
