Bentley Launches W12 Engined Flying Spurs

Bentley recently launched the new Continental Flying Spur and the Continental Flying Spur Speed, priced at Rs 2.25 crore and Rs 2.45 crore respectively. The Flying Spur is powered by a massive W12 engine that puts out 600bhp. The Flying Spur Speed uses the same W12 engine but develops 9% more power and 15% more torque. The engine efficiency is optimised by the use of lower friction, lighter-weight components and a new engine management system. All this results in a 0-100kmph time of 4.8 seconds and a top speed of 322kmph.

The Flying Spur Speed is the most powerful four-door Bentley ever made and incorporates subtle design cues to distinguish it from the Flying Spur. Its front grille and lower air intakes are dark-tinted chrome, while at the rear, wider rifled sports exhaust tailpipes hint at the performance potential of the Speed model. It also sports new 20-inch multi-spoke wheels available in both bright silver or darkened tungsten fitted with bespoke Pirelli PZero tyres introduced on the GT Speed model. These two new supercars will be sold alongside the two-door Continental GT and the Arnage R.
