Ford Trumps GM In Sales

[Ford](#) has reported a 43% increase in February sales to become U.S' top selling automaker for the month. It has also, for the first time in 12 years, surpassed General Motors in sales. The U.S. automaker sold 471 vehicles more than GM last month. Infact every major automaker except Toyota reported a sales boost as demand climbed for the industry overall. Though Ford's sales of 142,006 units just beat GM's 141,535, Ford's gains were across all vehicle lines and brands, including Volvo.
