How To Put Your Figo In Test Mode

Getting various service information out of your Ford Figo is easy. Simply put it into test mode and you can view various information about the car including battery voltage, digital fuel volume, engine temperature, digital tachometer, digital speedometer, etc. You can put your Ford Figo in test/diagnostic mode by simply following these steps - turn on the ignition to position one, Press tripmeter reset and with the tripmeter reset still pressed, turn on the ignition.
