Honda's Small Car To Have High Localisation

[Honda](#) India's small car which is scheduled for launch in 2011, will have around 80% in localisation of components. The company also said it expects the small car to sell in hot numbers, just like the City. The car will be rolled out from the company's plant in Greater Noida. The company is also looking to increase the use of local components of its existing models in India to around the same percentage. While its City and Jazz have around 75% localisation of components, the Civic has 71% and the Accord 28%.
