2011 Hyundai i10 Gets VTVT

Hyundai India will be launching an upgraded version of the i10 this Diwali. The 2011 Hyundai i10 gets new headlights, taillights, indicators on ORVMs, body coloured door handles and moulding, redesigned front and rear bumpers, new front grille and adjustable head rests. However the most significant change is the adoption of VTVT technology on the motor. The i10 is famous for being the most adjustable car in the country and if the VTVT does what it is supposed to do, we can expect the i10 to retain that honour.
