# Lamborghini Gallardo LP560-4 Polizia

A private ceremony was held at the Viminale Palace where Automobili Lamborghini S.p.A. donated a police version of the company's newest super sports car, Gallardo LP560-4 Polizia, to the head of the Italian State Police, Prefect Antonio Manganelli.

The new Gallardo LP560-4 Polizia, which replaces the previous Gallardo in use by the Italian police force since 2004 has a 560 horsepower engine that can reach speeds of up to 203 mph. The car will begin service with the Lazio Highway Police Department in order to continue accident and crime prevention to sustain security on the Italian roads.

Its predecessor is proof of Lamborghini's outstanding product quality. Since 2004, Rome's police force has had the first-generation Gallardo in regular police service. The sports car has clocked nearly 87,000 miles of patrol duty on the motorways of central and southern Italy, as well as on emergency medical transport detail.

A second Gallardo, painted in blue and white police colors, has been in service around Bologna, Italy since 2005. Its odometer already shows more than 62,000 miles. Aside from regular servicing, neither of the super sports cars has required major repairs.

In addition to the clearly effective deterrent offered by the presence and visibility of a Lamborghini on the highway, the technological equipment on board these vehicles makes them highly effective in the control of hazardous behaviour on the roads (high speeds, driving in the emergency lane, dangerous over-taking); the automatic recognition of number plate tracking and real-time transmission of images to the control rooms.

The cabin of the super sports car is fitted with the latest advancements in police technology to immediately document the evidence of any transgression. The video system is positioned in the center of the cabin with a camera fitted next to the rear view mirror and a computer and recording equipment behind the seats. As soon as police officers discover a suspicious driver, they activate the "Proof Video Data System." With the help of GPS

data, the device can calculate the location, direction of movement and speed of the Lamborghini. This combined with the distance and time before intercept, accurately determines the speed of the vehicle being pursued.

Using radio data transmission, the video system in the Gallardo Polizia transfers its images in real time to the relevant police station. There, the videos are stored and used for automatic number plate retrieval. This information can be used for immediate identification of stolen vehicles.

In addition to its high tech equipment, the Gallardo is also fitted with the "classic" array of police equipment, such as a gun holster, police radio equipment and the "Paletta," the traditional hand-held stop sign used to advise motorists and traffic offenders to pull over. Officers can then use a removable screen to show offenders their misdeeds immediately, complete with an overlay of all the associated data.
