Modified Land Rover Gets 1500HP

Bell and Auren found each other on a forum. After a long time they made a company that specialises in Land Rover modifications. Under the very long bonnet of the model proposed by these two Germans can be installed different engines. At this moment, clients can choose between V8s, of 4,6l and 235HP and a 5.0 of 280HP.

Now, they two are working at an implementation of a V16 obtained from two V8 engines that were put together. But this is not all, because the best version will have an engine of 27 liters, a Rolls Royce supercharged V12, which was initial made for a plane. Its power will be bigger than 1500HP. The price of the basis model will be about 125.000 euro, and only 10 exemplars will be made in a year.
