# **New W212 Mercedes Benz E Class Spied**

The all new ninth generation [Mercedes Benz E-Class](#) (also known as the W212) will be launched very soon. The car has been undergoing homologation for quite some time now and is currently being tested at Mercedes-Benz India's Pune plant. The new E-Class will be initially launched with a 3.5L, 24valve V6 petrol producing 292bhp mated to a 7-GTronic automatic transmission with paddle shifters. The diesel engine will join in later with the 320CDi.

The new E Class is touted as the most beautiful car in the world, we don't quite agree, but we don't deny that either. It has LED daytime running lights. If you observe the pictures closely you will notice the different set of wheels (maybe for testing purposes). Mercedes will follow up with less powerful engines next year for the value conscious buyers.
