# **Tata Motors Launches New Starbus Range In Maharashtra**

Tata Motors has announced the launch of an all-new Starbus range of buses in the state of Maharashtra. These buses are being manufactured at the state-of-the-art fully automated Tata Marcopolo Motors Limited (TMML) plant which is a joint venture between Tata Motors Limited and Marcopolo of Brazil, the world leader in body building for buses and coaches, located in Dharwad, Karnataka. The Starbus will be sold to customers as fully built buses and coaches.

The all-new stylish Starbus range of buses has been ergonomically designed giving the external body a round shape, while the internal styling has been given detailed attention with superior fittings, wider seats and comfortable back rests. These buses come with a new chassis and new body, to give best-in-class rides that offer enhanced passenger comfort. The longer chassis ensures extra leg room including those occupying the last row of seats. The length and the wheelbase of these buses have been extended and their low NVH levels contribute to smoother rides. The bus bodies are made from high-grade, high-strength steel, to give them the robustness needed to undertake journeys day after day. The Starbus has taken the space factor to the next level in the bus segment.

These buses are ideal for all applications including transportation of school children, company staff, route bus and as a transport to route destinations. The introduction of the Starbus range of buses is yet another important milestone in Tata Motor's efforts to continually refresh its product portfolio with the introduction of newer products with superior technologies.
