Toyota Corolla Altis To Get CVT

Toyota India will launch the facelifted 2011 Corolla Altis in May, 2011. The car has been under test for a long time now. The delay in the launch of the new Corolla Altis is because of the company testing the Continuously Variable Transmission (CVT) in the car. The 7-speed CVT in the new Corolla will help in better fuel efficiency and will become popular amongst the old school automatic cars present in the segment. The Corolla AT will be priced around Rs. 70,000/- more than its manual variant.
