Toyota Innova BSIV To Get Intercooler

Finally the [Toyota Innova](#) is getting the much needed boost in power that it deserved. The troubled Japanese auto giant will be upgrading its best selling MPV to comply with Bharat Stage IV emission norms which go into effect from the 1st of next month (no joke this). The upgrade will see the Innova get an intercooler (no hood scoop here) along with a slight boost of power to 109 bhp, up from the current 102 bhp. The intercooler will also help in better performance on hot days and better mileage too. A new catalytic converter will also feature on the BSIV Innova along with a price hike of Rs. 15,000/-
