Tyrestore Introduces Run Flat Tyre Fitting Equipment

Siremull Hirachand's Tyrestore in Greams Road, Chennai is the first to introduce the revolutionary Italian robotic tyre fitting equipment specially designed to prevent damage to the tyres and alloy wheels while fitment. This is a new-concept tyre changer and a groundbreaking innovation on the international scene. This equipment is recommended by Michelin and Bridgestone worldwide for the fitment of the new generation Tubeless, Runflat, Low/Ultra Low Profile, Hi Performance tyres and is customised to tyrestore's requirements to suit the Indian operating conditions.

This tyre changer's unique feature is the exclusive robotic Robofit tool (MF patent) which enables the user, with no extra physical effort, to mount and demount any type of tyre without the aid of a bead removing lever. The Robofit tool consists of two different heads, one for demounting and the other for mounting, both made from high-strength plastic to ensure against wheel and tyre damage. Two levers provide simple roller positioning and simultaneous or independent breaking of the upper and lower beads. The breaking of the beads is very fast, effective and safe. An 8-movement joystick helps control the operations of the robotic tool arm.

This equipment helps in preventing tyre and sidewall damages along with preventing damage to the wheels. It can be used to fit tyres/wheels upto 26". Car enthusiasts in Tamilnadu, Pondicherry, Karnataka and Kerala can now enjoy the benefits of the latest technology in tyre servicing and ensure that their new generation tyres and wheels are safely handled.
